

SYSTEM AND METHOD FOR IMPLEMENTING AN INTEGRATED INFORMATION SYSTEM

Abstract of the Disclosure

A system and method for implementing an integrated information system are
5 provided. A premises server is in communication with a variety of information sources that produce monitoring data for a premises. The premises server collects, presents, and transmits the monitoring device data to a central server capable of processing data from multiple premises servers. The central server receives the data and traverses one or more logical rule sets to determine whether the inputted data
10 violates the rules. Based on an evaluation of the rules, the central server generates outputs in the form of communication to one or more authorized users via a variety of communication mediums and devices and/or the instigation of a variety of acts corresponding to the evaluation of the rules.
